

controller/

// AuthController.java – Handles login & logout requests
// HomeController.java – Controls index / home page after login
// ModuleController.java – Manages stats, quests, profile pages

entity/

// User.java – User table: credentials & roles
// Stats.java – Level, XP, power, progress data
// Quest.java – Quest/task details & status

dto/

// LoginDTO.java – Carries login data
// UserDTO.java – Transfers safe user data to UI
// QuestDTO.java – Sends quest data without DB internals

service/

// AuthService.java – Authentication logic
// UserService.java – User business logic
// QuestService.java – Quest logic & rewards

repository/

// UserRepository.java – User database access
// QuestRepository.java – Quest database access

security/

// SecurityConfig.java – Security rules & protected routes
// JwtUtil.java – JWT creation & validation (or session config)

templates/

// login.html – Login page UI
// index.html – Home dashboard
// stats.html – User stats view
// quests.html – Quest management UI
// profile.html – User profile UI

Layer Communication

Controller → Service → Repository → Database
DTO ↔ Controller
Entity ↔ Repository
